To Convert Square Feet Into Acre
(1 to 10 Square Feet)

1 square foot00002295684	acre
2 square feet00004591368	“
3 “ “00006887052	“
4 “ “00009182736	“
5 “ “00011478420	“
6 “ “00013774104	“
7 “ “00016069788	“
8 “ “00018365472	“
9 “ “00020661157	“
10 “ “00022956841	“

One Acre Contains:

100,000.....	Square links.....	pauku kuea
43,560.....	Square feet.....	kapuai kuea
4,840.....	Square yards.....	iwilei (i-a) kuea
1,210.....	Square fathoms.....	anana kuea
160.....	Square rods.....	roda kuea
10.....	Square chains.....	kaulahao kuea
4.....	Square roods.....	ruda kuea

NOTE:—Owing to the frequent use of tapes measuring 50, 75 and 100 feet in length by some of the “old-time” surveyors, instead of the standard chain of 100 links or 66 feet, much difficulty is now found in checking up areas of lands, the metes and bounds of the descriptions of which are given in chains of such varying lengths.

To Convert Rods Into Acre and Square Feet

* 1 sq. yard equals 9 sq. ft. or .00020661157 acre.

RULE

To obtain the acreage or square feet of yards over 4840 add the figures of any two yards in the above table which total the number of yards under consideration.

* Originally the term "huina-ha-like"—(united four equal sides) was used to mean a "square." "Kuea" is now generally used instead.

§ The term "stadia"—"setadia" was used in "square measure" when surveying was first taught in Lahainaluna in 1843. Literally "stadia" means a lineal measure of varying lengths according to the standard adopted by the countries using it.

† A "yard of land" a yard wide, also means a quarter of any of the acres in a "hide." Originally, the term was used to designate the area of land that can be plowed in a given time by a team of oxen in England.

‡ A "hide of land" was the area included within a strip of a bullock's hide, and originally used as the ordinary unit of land in England, because considered requisite for the support of a family.

The term "hide" and "yard" of land were used here in Hawaii by the early English settlers.
